

Voice Termination & Inbound SMS

In 2007 Level 3 began the management of International voice termination for the +87810 international country code.

The Level 3 network solutions have the capability to support large-scale delivery of content, transport and voice, all while delivering high levels of quality and reliability.

We are now adding inbound text messaging functionality to this numbering resource.

Mobile Originated SMS is a highly effective and practical way for businesses to interact with their customers and staff in real time.

Businesses and individual users can employ mobile originated services for a range of applications, including on-pack promotions and customer response campaigns or simply to hear from family and friends.
