

Global implementation of +87810

VisionNG and Sentiro have made significant progress this year in implementing the global Country Code +87810 in Fixed and Mobile networks throughout Europe and the Far East.

Level 3 have long since been routing traffic to this Country Code and with BT opening their network in November, 2009 this will greatly expand the routing footprint of this unique resource.

If you are an operator who has not yet defined this Country Code in your network and wish to do so, please contact vincent.bergin@sentiro.com for an updated IR21.

Having set the wholesale tariff at a modest level it is hoped the retail cost will appeal to NGN's and Multimedia service providers wishing to deploy global services and who require connectivity from the PSTN at a reasonable cost to callers.
