

Global numbers for global services

If you are planning a global service and require a global numbering and addressing range, we can assign a dedicated block from the UPT 87810 range.

87810 is a global number range delegated by the ITU for global services and approved for Personal, IoT and M2M global services. It comprises 10 Billion unique numbers so is suitable for large scale deployments.

Utilizing a Number management system able to operate in Smart Contracts Framework and Blockchain Technology. Sim solutions are available using IMSI resources delegated by the ITU.

You can mail vincent.bergin@sentiro.com for an initial discussion about your project and requirements.
